REGION IX

75 Hawthorne Street
San Francisco, CA 94105-3901

APR 06 2018

Eileen Sobeck
Executive Director
California State Water Resources Control Board
P.O. Box 100
Sacramento CA, 95812-0100

Subject: California 2014-2016 CWA Section 303(d) List of Impaired Waters

Dear Ms. Sobeck:

I am pleased to approve the subject list of impaired waters, including all water quality limited segments (WQLSs) and associated pollutants identified by the State Water Resources Control Board (State Board) as requiring a total maximum daily load under CWA section 303(d). In addition, EPA concurs with the State Board's delisting of 191 WQLSs based on approved TMDLs. The legal requirements and the rationale for the actions are detailed in Enclosure 1.

EPA previously conveyed the desirability of evaluating temperature data developed by the California Department of Fish and Wildlife (CDFW) and the California Department of Water Resources (CDWR) in order to assess impacts to impaired fish migration and related beneficial uses in the Delta and San Joaquin River (Enclosure 2). EPA recognizes the challenges of working with voluminous continuous monitoring data and appreciates the constructive discussions our staffs have had on this issue. EPA appreciates the State Board's consideration of reviewing the temperature data "off cycle" so that any possible additional listings could be included in the next review of WQLSs. To assist the State Board, EPA encloses (Enclosure 3) a synthesis of the CDFW and CDWR temperature data for your consideration.

I value the collaboration between our two agencies and look forward to continuing our partnership to protect California's waters. If you have any questions, please contact me at (415) 972-3337, or have your staff contact Janet Hashimoto, Manager of the Water Quality Assessment Section, at (415) 972-3452.

Sincerely,

Tomás Torres
Director, Water Division

Enclosure 1

EPA Review of California's 2014-16 CWA Section 303(d) List Submitted February 5, 2018

Purpose

The purpose of this document is to describe the rationale for the EPA's approval of California's 2014-16 list of water quality limited segments requiring a Total Maximum Daily Load (TMDL) under Clean Water Act Section 303(d). The following sections identify those key elements to be included in the list submittal based on the Clean Water Act and EPA regulations (see 40 CFR 130.7). EPA carefully reviewed the State's submittal including the listing decisions, the assessment methodology used by the State in developing its list, and supporting data and information. EPA's review of California's list is based on EPA's analysis of whether the State reasonably considered existing and readily available water quality-related data and information, and reasonably identified waters required to be listed.

This review describes the basis for EPA's decision to approve the State's listings of water quality limited segments requiring a TMDL identified in the State's 2014-2016 Integrated Report, (see "Category 5: 2014 and 2016 California 303(d) List of Water Quality Limited Segments"). The portion of the California Integrated Report which EPA defines as the 303(d) List are the waters and pollutants California identifies as "5A: TMDL still required."

Statutory and Regulatory Background

Identification of WQLSs for Inclusion in the List

CWA Section 303(d)(1) directs each state to identify those waters within its boundaries for which effluent limitations required by Section 301(b)(1)(A) and (B) are not stringent enough to implement any applicable water quality standard (WQS), and to establish a priority ranking for addressing such waters, taking into account the severity of the pollution and the uses to be made of such waters. The 303(d) listing requirements apply to both waters impaired by point sources and waters impaired by nonpoint sources of pollution.

The EPA regulations provide that a state does not need to list WQLSs where the following types of controls are adequate to implement applicable standards: (1) technology-based effluent limitations required by the Clean Water Act, (2) more stringent effluent limitations required by federal, State or local authority, and (3) other pollution control requirements required by State, local, or federal authority. See 40 CFR 130.7(b)(1).

In developing its list, each state is required to assemble and evaluate all existing and readily available water quality-related data and information, including, at a minimum: (1) waters identified as partially meeting or not meeting designated uses or as threatened in the state's most recent CWA Section 305(b) report; (2) waters for which dilution calculations or predictive modeling indicate nonattainment of applicable standards; (3) waters for which water quality problems have been

reported by governmental agencies, members of the public, or academic institutions; and (4) waters identified as impaired or threatened in any CWA Section 319 nonpoint source assessment submitted to the EPA. See 40 CFR 130.7(b)(5). The EPA's 2006 assessment and listing guidance describes additional types of water quality-related data and information that should be assembled and evaluated for developing state lists.

Consideration of Existing and Readily Available Water Quality-Related Data and Information

The EPA regulations at 40 CFR 130.7(b)(6) require each state to include, as part of their submittals to the EPA, documentation to support decisions to rely or not rely on particular data and information, and decisions to list or not list waters. Such documentation needs to include, at a minimum, the following information: (1) a description of the methodology used to develop the list; (2) a description of the data and information used to identify waters; and (3) any other reasonable information requested by the EPA.

Priority Ranking

The EPA regulations at 40 CFR 130.7(b)(4) require each state to prioritize waters on its list for TMDL development, and to identify those WQLSs targeted for TMDL development in the next two years. In prioritizing and targeting waters, each state must, at a minimum, take into account the severity of the pollution and the uses to be made of such waters. See 303(d)(1)(A). A state may consider other factors relevant to prioritizing waters for TMDL development, including immediate programmatic needs, vulnerability of particular waters as aquatic habitats, recreational, economic, and aesthetic importance of particular waters, degree of public interest and support, and state or national policies and priorities. See 57 FR 33040, 33044-45 (July 24, 1992), and EPA 1991.

Analysis of Submittal from the State of California

Identification of WQLSs

The EPA has reviewed the State's submittals and concludes that the State developed the 2014-16 List in compliance with CWA Section 303(d) and 40 CFR 130.7. The EPA's review is based on its analysis of whether the State reasonably considered existing and readily available water quality-related data and information and reasonably identified waters required to be listed.

California used its 2012 Section 303(d) List and 305(b) Report as its starting point, and based its 2014-16 Section 303(d) submittal on its analysis of readily available data and information to determine whether additions to or deletions from the 2012 List were necessary. California's approach, wherein previously listed waters remain as WQLSs unless the existing and readily available water quality-related data no longer indicate impairment, is consistent with federal requirements. The EPA finds it was reasonable for California to include most of the previously listed waters on the 2014-16 List.

The State also made efforts to clarify the geographic extent of waterbody segments between the 2012 Section 303(d) List and 305(b) Report and the 2014-16 Water Quality Integrated Report. These clarifications reflect changes in waterbody names, changes in extent of impairment or the splitting of a waterbody into one or more segments. See 2014-16 Water Quality Integrated

Report, Appendix J and Miscellaneous Changes Appendix K. The State updated its web map application to display assessment data and results addressed in the 2014-16 Integrated Report¹. This California 2014-16 Integrated Report Web Map Application was assembled to make publicly available information about the waterbodies and sample locations assessed in the California 2014-16 Integrated Report.

Assembly of Data and Information

The EPA's review found the data compilation process was clear and provided an adequate basis for water body assessments. The State Board staff devoted considerable effort to assembling new data and information for the 2014-16 Water Quality Integrated Report and development of the 303(d) list. Staff compiled data and information from multiple sources, including each of the data and information categories identified at 40 CFR 130.7(b)(5). The State issued public notice soliciting data and information from the public on January 14, 2010, with submittals requested by August 30, 2010.

Additionally, the solicitation notice was emailed to an extensive emailing list, and posted on the State Board's website. Overall, the State considered data and information submitted during the comment period including: fish advisories; USEPA databases; existing and readily available water quality data and information reported by local, State and federal agencies, citizen groups, academic institutions and the public; and other sources of data and information that were readily available to staff. EPA finds the State's approach to assembling readily available information to be reasonable. EPA's review found the data compilation process was sufficiently clear and consistent with federal listing requirements, and a sufficient basis for water body assessments.

Listing Methodology

The submittal summarizes the listing methodology used by California to develop the 2014-16 Water Quality Integrated Report and 303(d) list, and specifies explicit factors for making listing and delisting decisions for different pollutant types based on different kinds of data. Data are evaluated using the Water Quality Control Policy for Developing California's Clean Water Act Section 303(d) List (Listing Policy)².

California's 2014-16 Water Quality Integrated Report includes a list of water segments where a water quality standard is not met or expected to be met, but an impairment is being addressed by an EPA approved TMDL. See 2014-16 Water Quality Integrated Report, Appendix B, Approved TMDL List. EPA understands this list to include water segments and pollutant pairs which the State has identified as impaired but is not requiring a new or revised TMDL at this time (Appendix C. Category 4a) and water segments where the implementation of other pollutant control measures is expected to attain water quality (Appendix D. Category 4b).

The EPA reviewed the various assessments and concludes the State's assessments are consistent with federal listing requirements and applicable water quality standards.

Public Comments

The State Board and Regional Boards sought public input at several points in the process of developing the 2014-16 Water Quality Integrated Report including:

- The State Board sent a Notice of Public Solicitation of Water Quality Data and Information for the Integrated Report on January 19, 2010. The deadline for submittal of the data was extended from June 30 to August 30, 2010.
- The Regional Boards for the San Francisco, Central Coast, Los Angeles, Central Valley, Santa Ana and San Diego Regions provided advanced notice and opportunity to the public to submit written comments, responded in writing to those written comments, and considered oral testimony in 2016 and 2017.
- The State Board solicited public comments on the list on June 9, 2017 with comments due by July 10, 2017. The response to comments is posted on the State Board website.
- The State Board held a Public Hearing on the list on October 3, 2017.
- The 2014-16 303(d) List was approved by the State Board on October 3, 2017 (Resolution No. 2017-0059).

Conclusions

The EPA Finds that California Properly Added 806 New WQLSs to the 2014-2016 List

Based on all the existing and readily available data, California identified 974 WQLSs in Category 5, which are waterbodies with an impairment for at least one beneficial use in the Integrated Report (Table 1) but only 806 of these WQLSs require a TMDL and are added to the 2014-16 List. Of the 974 WQLSs, 113 WQLSs already have TMDLs in place (see Appendix, Table A1). These 113 WQLSs would normally be in Category 4a but California keeps these waterbodies on the impaired waterbodies list as 5b until all impairments are addressed. 55 WQLSs are being addressed by another program (see Appendix Table A2). These would normally be in Category 4b, but California keeps these waterbodies on the impaired list as 5c. Of the 55 WQLSs addressed by another program, 30 WQLSs for trash are being addressed by the State's Trash Policy and 24 WQLSs for pesticides are being addressed by actions of the Central Valley Regional Board including Resolution No. R5-2014-0041) and 1 WQLS for nitrate was removed because a State action removed the source of the problem.

The EPA Finds That California Demonstrated Good Cause for Delisting 191 WQLSs

EPA reviewed California's rationale for its decision to delist and not include on its 2014-16 List several waters that were included on its 2012 Section 303(d) List. Of the 191 WQLSs that were removed from the 2012 List, 142 of WQLSs were removed due to improved water quality, 48 WQLSs were removed due to TMDL development (4a) and 35 WQLSs were removed because a State action removed the source of the problem (4b). The State demonstrated to EPA's satisfaction that these WQLSs do not require TMDLs or TMDLs were completed. See, 40 CFR 130.7(b)(6)(iv).

Table 1 Summary of WQLSs added to the 2014-16 Integrated Report.

Pollutant Class	San Francisco RWQCB 2	Central Coast RWQCB 3	Los Angeles RWQCB 4	Central Valley RWQCB 5	Santa Ana RWQCB 8	San Diego RWQCB 9	Pollutant Totals

Sedimentation		1					1
Specific-conductivity		1					1
Totals by Regional Board	7	47	62	45	15	15	191

Priority Ranking and Scheduling

The State's submittal includes a priority ranking for the TMDL completion for those waters requiring a TMDL, using estimated dates for TMDL completion or completion of other actions to achieve water quality. See 2014-16 Water Quality Integrated Report, Appendix A. EPA finds that the priority ranking for TMDL development meets the requirements related to priority setting in 40 CFR 130.7(b). The EPA is not acting on these priorities as federal regulations do not require the EPA approval of priority rankings or schedules.

Administrative Record Supporting This Action

In support of this decision to approve WQLSs to California's 2014-16 List, the EPA reviewed the materials submitted by California with its listing decisions. The administrative record supporting EPA's decision to approve the State's inclusion of the waters and pollutants identified on the State's 303(d) List include the 2014-16 Water Quality Integrated Report, Appendix A, Category 5 List, EPA guidance concerning preparation of Section 303(d) lists, EPA's past comments on California's listing methodology and draft lists, and EPA's decision letter and its enclosures.

The EPA is aware that the State compiled and considered additional materials (e.g., raw data and water quality analysis reports) as part of its list development process that were not included in the materials submitted to the EPA. It is unnecessary for the EPA to consider all the materials considered by the State to determine that the State complied with the applicable federal listing requirements. Federal regulations do not require the State to submit all data and information considered as part of the submittal. See 40 CFR 130.7(b)(6)(ii). However, at the EPA's request, the State did provide additional materials, such as raw data and other relevant information. The EPA determined that the materials submitted by the State provide sufficient documentation to support the decision to approve the 2014-16 List.

Public comments received on the Draft 2014-16 Water Quality Integrated Report, and State Water Board Staff responses to comments, are provided on the State Board web page³. EPA reviewed the State's responses to comments received on the Final 2014-16 Water Quality Integrated Report. EPA found the State's responses to public comments reasonable and in accordance with federal listing requirements.

Re: Proposed Revisions to the 303(d) List of Impaired Water Bodies and Integrated Assessment Report for the Central Valley Region

Dear Mr. Simi:

EPA reviewed the Clean Water Act Sections 305(b) and 303(d) 2014 Integrated Report for the Central Valley Region Draft Staff Report, dated September 2016 and have a few comments. We request the State consider further analysis of several waterbodies and additional listings where data show impairment.

Temperature Assessments Discard Many Impaired Waters

The Staff Report indicates that of 189 new waterbody evaluations for temperature, elevated temperatures were found in 39 yet only one was recommended for listing. The State states in the Staff Report that most of these were waterbodies that had surface grab samples only in summer months at the edges of swimming holes and would be unrepresentative of temperature conditions. However, in reviewing the lines of evidence, there are many waterbodies that are well mixed lotic systems where a surface grab sample showing exceedances of temperature thresholds would still be representative of most of the water column and suggest a temperature impairment for the waterbody as a whole. There are several waterbodies, such as segments of the Sacramento River that have substantial data collected under the Irrigated Lands Regulatory Program indicating impairment. Additionally, for many of these waterbodies continuous monitoring stations with existing data published by a sister State Agency, Department of Water Resources in publically available databases (e.g. California Data Exchange Center (CDEC) found at www.cdec.water.ca.gov and the California Water Data Library <http://www.water.ca.gov/waterdatalibrary/>) are available to confirm impairments initially identified by the already analyzed grab sample data.

EPA also notes that the thresholds selected in the Staff Report for this listing cycle, 21°C and 24°C for rainbow trout and steelhead respectively, are much warmer than the temperatures recommended in EPA's 2003 *Region 10 Guidance for Pacific Northwest State and Tribal Temperature Water Quality Standards*.

Existing Numeric Temperature Criteria Do Not Appear to be Utilized as Thresholds

EPA notes that in the Lines of Evidence for river segments that have more protective numeric standards than the thresholds utilized for comparison to the narrative objective, the more

protective numeric standard was not used. Table III-4 and III-4A in the Sacramento and San Joaquin River Basin Plan identifies specific objectives for Deer Creek and the Sacramento River. As an example, 56°F (13.3°C) is a numeric objective for Sacramento River between Keswick Dam and Hamilton City but the line of evidence for this segment appears to have been compared to a 21°C threshold.

Continuous Monitoring Data in the Delta is “Readily Available Information”

In implementing section 303(d) of the Clean Water Act the State is required to assess all “readily available data and information”¹ when putting together a list of impaired waters. Federal policy² does not define this as narrowly as California has chosen to interpret it. EPA does not believe all readily available information were included in the development of the proposed list of impaired waters. California appears to have discarded all the continuous data reported in CDEC and the California Water Data Library. However, EPA notes this data is used by the State Board to implement water management decisions and is used by the Central Valley Regional Board in developing TMDLs.

The omission of continuous monitoring information is particularly notable in the Delta where 24 continuous monitoring stations are identified in Table 7 of the 2006 Bay-Delta Plan as stations to assess compliance with water quality objectives³ and are not assessed for this Integrated Report. It has resulted in illogical listing decisions such as the listing of the Stockton Deep Water Ship Channel for temperatures unsuitable to support migration of cold water species, but none of the surrounding waters are listed as impaired. The Draft Staff Report also has inconsistent assessments for dissolved oxygen and salinity in the 2006 Bay-Delta Plan when there is an abundance of publically available data identifying broader impairments. These data should be assessed and incorporated into the final Staff Report.

The broader issue of incorporating readily available continuous monitoring data, not just from the Delta but across the State, should be addressed in the next listing cycle. These data are not readily incorporated into the California Environmental Data Exchange Network (CEDEN) but are collected at a great cost and effort by the State and other agencies and should be assessed against water quality objectives to accurately report the condition of California’s waters to the public.

¹ In developing Section 303(d) lists, states are required to assemble and evaluate all existing and readily available water quality-related data and information, including, at a minimum, consideration of existing and readily available data and information about the following categories of waters: (1) waters identified as partially meeting or not meeting designated uses, or as threatened, in the state’s most recent CWA Section 305(b) report; (2) waters for which dilution calculations or predictive modeling indicate nonattainment of applicable standards; (3) waters for which water quality problems have been reported by governmental agencies, members of the public, or academic institutions; and (4) waters identified as impaired or threatened in any CWA Section 319 nonpoint assessment submitted to EPA. See 40 CFR § 130.7(b)(5).

² See pp. 30-32 of the Guidance for 2006 Assessment, Listing and Reporting Requirements Pursuant to Sections 303(d), 305(b) and 314 of the Clean Water Act (IRG). <https://www.epa.gov/sites/production/files/2015-10/documents/2006irg-report.pdf>

³ “This Plan requires, and the permits and license of the DWR and the USBR include conditions for, a monitoring program to provide baseline information and determine compliance with water quality objectives.” pp 41 of the 2006 Bay-Delta Plan

Monitoring Data Collected by CDFW for San Joaquin River Restoration Has been Overlooked

A multi-agency effort has been underway to restore the San Joaquin River since 2008. The upper restoration reaches have had temperature data collected since well before the data cutoff of 2010 and continue to be intensely scrutinized for suitability for salmonid reintroduction. These data are collected by the California Department of Fish and Wildlife (CDFW) and are an attachment to this letter.

The Salmon Protection Objective Should be Assessed

EPA notes that despite readily available data and information the Staff Report does not assess the Salmon Protection Objective found in Table 3 of the *Water Quality Control Plan for the San Francisco Bay/Sacramento- San Joaquin Delta Estuary* (2006 Bay-Delta Plan)

Water quality conditions shall be maintained, together with other measures in the watershed, sufficient to achieve a doubling of natural production of chinook salmon from the average production of 1967-1991, consistent with the provisions of State and federal law.

This objective was adopted in the Water Quality Control Plan due to its inclusion in the Central Valley Project Improvement Act (CVPIA). Pursuant to CVPIA, US Fish and Wildlife Service has developed numeric targets to achieve this goal that are included in Table 1 and Appendix B-1 of the Restoration Plan for the Anadromous Fish Recovery Program. These can be accessed at the following website and are also included as an Appendix to this letter:

https://www.fws.gov/cno/fisheries/CAMP/Documents/Final_Restoration_Plan_for_the_AFRP.pdf

California collects the data used to assess progress towards these targets for many of these tributaries. CDFW publishes this information at this website:

<https://nrm.dfg.ca.gov/FileHandler.ashx?DocumentID=84381&inline=1>

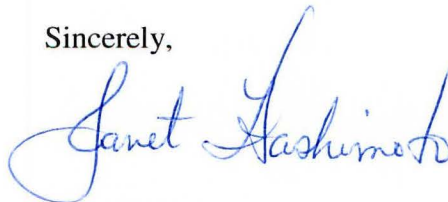

And existing program summary describing how all of the data are collected can be found here:

<https://nrm.dfg.ca.gov/FileHandler.ashx?DocumentID=3491&inline>

The listing for Salmon Protection would be consistent with the Water Quality Control Policy for Developing California's Clean Water Act Section 303(d) List. Section 3.9 states that a water segment should be listed "if the water segment exhibits significant degradation of biological populations as compared to reference site(s) and is associated with water or sediment concentration of pollutants including but not limited to chemical concentrations, temperature, dissolved oxygen or trash". There are readily available data collected by a sister State agency (CDFW) to assess the Salmon Protection objective.

If you have any questions, please contact Valentina Cabrera at 415-972-3434 or cabrera-stagno.valentina@epa.gov or Terry Fleming at 415-972-3462 or fleming.terrence@epa.gov.

Sincerely,

Janet Hashimoto
Chief, Water Quality Assessment Section

Appendix: Table 1 and Appendix B-1 from the Restoration Plan for the Anadromous Fish Recovery Program

Table 1. Target production levels for anadromous fish in Central Valley rivers and streams.

Species	Target
Chinook salmon, all races ^a	990,000
Fall run	750,000
Late-fall run	68,000
Winter run	110,000
Spring run	68,000
Steelhead ^b	13,000
Striped bass ^c	2,500,000
American shad ^d	4,300
White sturgeon	11,000
Green sturgeon	2,000

Preliminary estimated production targets for chinook salmon. Data for rivers without a race designation are for fall-run chinook salmon.

Race and river	Production targets

Tuolumne River	38,000
Merced River	18,000

Enclosure 3

EPA Synthesis of Continuous Temperature Data from California Department of Fish and Wildlife and the California Department of Water Resources

This Enclosure summarizes EPA's evaluation of temperature monitoring data in certain water bodies and considers how the indicated temperatures may adversely affect the designated (beneficial) uses for fish habitat, migration, and spawning.

The water bodies under consideration are the San Joaquin River (Friant Dam to Mendota Pool), San Joaquin River (Bear Creek to Mud Slough), San Joaquin River (Mud Slough to Merced River), Delta Waterways (southern portion), Delta Waterways (central portion), Delta Waterways (northern portion), Delta Waterways (western portion), Suisun Bay, and Carquinez Strait.

Applicable water quality standards for these water bodies are established in the Sacramento and San Joaquin River Basin Plan. All the aforementioned segments have the Cold Freshwater Habitat (COLD) designated use and the Migration of Aquatic Organisms (MIGR) designated use for Cold Freshwater Habitat (COLD) with a footnote indicating "salmon and steelhead" (See RWQCB Central Valley, 2009, Table II-1). The San Joaquin River (Friant Dam to Mendota Pool) segment also has the Spawning, Reproduction, and/or Early Development (SPWN) designated use for COLD with a footnote indicating "salmon and steelhead" (See RWQCB Central Valley, 2009, Table II-1, pp. II-7). Additionally, the Sacramento and San Joaquin River Basin Plan addresses temperature with the following narrative and numeric objectives: "The natural receiving water temperature of intrastate waters shall not be altered unless it can be demonstrated to the satisfaction of the Regional Water Board that such alteration in temperature does not adversely affect beneficial uses. ... At no time or place shall the temperature of COLD or WARM intrastate waters be increased more than 5°F above natural receiving water temperature. ... In determining compliance with the water quality objectives for temperature, appropriate averaging periods may be applied provided that beneficial uses will be fully protected." (RWQCB Central Valley Region, 2009, pp. III-8)

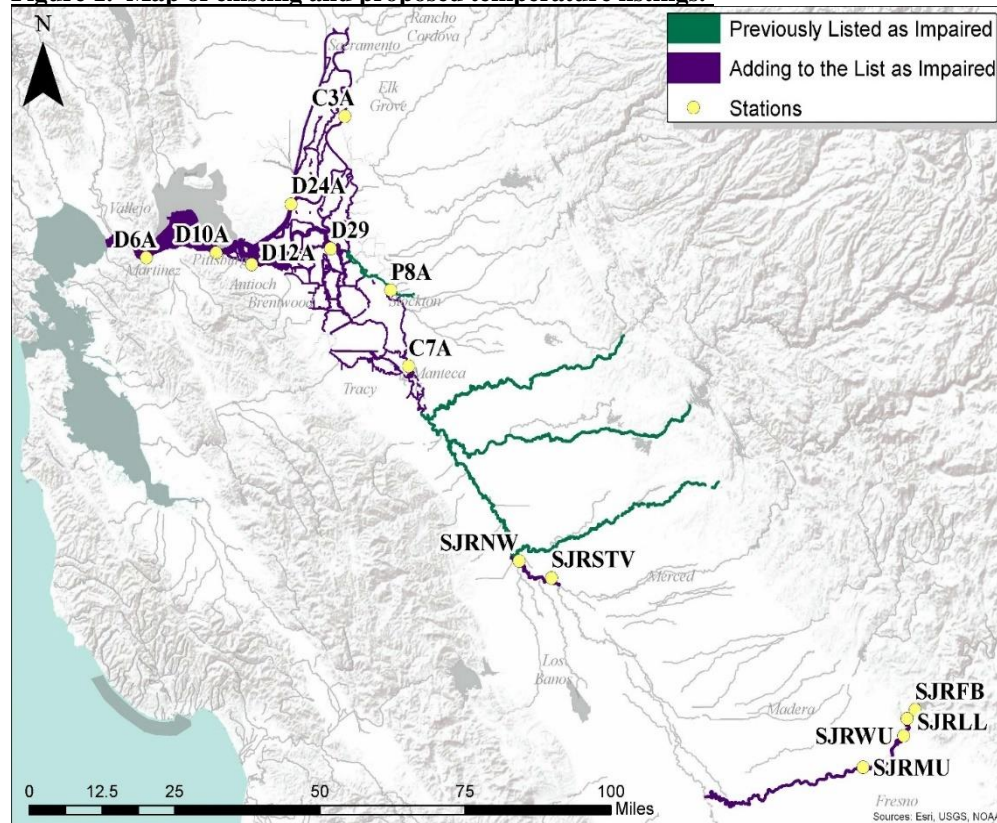

Documentation of the natural receiving water temperature is not readily available so an assessment of whether the migration and spawning uses were being achieved was conducted by comparing the current temperatures to the temperature requirements of salmonid species identified in the EPA Region 10 Guidance for Pacific Northwest State and Tribal Temperature Water Quality Standards (2003a). EPA believes that the Region 10 guidance and its associated Technical Issue Papers provide the most comprehensive compilation of research related to salmonid temperature requirements available. The studies compiled in the guidance and associated papers address the full geographic extent of salmonid populations including California. The recommended numeric criteria to protect coldwater salmonids in this report were recommended for use by California's Department of Fish and Game (now Fish and Wildlife) in their temperature data submittal and subsequent comments for California's 2008-2010 303(d) list and were subsequently utilized by EPA to add water-quality limited segments to that list. Additionally, the guidance's recommended numeric criteria have been used by the National Marine Fisheries Service as thresholds when considering the suitability of expected water temperatures for Central Valley steelhead in the Stanislaus River under the proposed actions in their Biological and Conference Opinion on the

Long-term Operations of the Central Valley and State Water Project (2009). An enormous amount of temperature data has been collected for the subject segments of the San Joaquin River and its tributaries. After review of the data, EPA finds that the subject segments are not attaining the relevant numeric temperature criteria for migration, freshwater habitat and spawning of coldwater salmonids. Observed exceedances are greater than the 10% exceedance threshold for conventional and other pollutants as expressed in Table 3.2 of the State Listing Policy. A summary of the water body specific findings is included in the following section.

Data Used by EPA

EPA Region 9 has reviewed continuous temperature data collected by the California Department of Fish and Wildlife (CDFW) for the San Joaquin River restoration project from 2002 to 2010 and data from the Department of Water Resources (DWR) from January 1, 1995 to August 30, 2010 from the sampling sites shown in Figure 1 and Table 1.

Figure 1. Map of existing and proposed temperature listings.

The Region 10 guidance includes recommended temperature criteria for salmon and trout based on different life stages. The recommended temperature for salmon and trout adult migration is $<20^{\circ}\text{C}$ as a 7-day average daily maximum (7DADM) and this was applied to all delta segments and the lower two reaches of the San Joaquin River. In the upper San Joaquin River (Friant Dam to Mendota Pool) multiple life stages were assessed. For the migration life stage and the Steelhead summer rearing life stage the Salmon and Trout Migration plus Non-Core Juvenile Rearing recommendation was utilized and is $<18^{\circ}\text{C}$ 7DADM. For spawning, the Salmon and Trout Spawning, Egg Incubation, and Fry Emergence recommendation was utilized and is $<13^{\circ}\text{C}$ 7DADM. For juvenile rearing the Salmon/Trout “Core” Juvenile Rearing recommendation was utilized and is

<16°C 7DADM. The evaluation thresholds and seasons during which they were applied are summarized below in Table 2.

Table 1. Waterbodies evaluated for listing

Waterbody	Size	Site Location	Site Code	Source
San Joaquin River (Friant Dam to Mendota Pool)	70 miles	SJR Friant Bridge	SJRFB	CDFW
		SJR Lost Lake	SJRLL	CDFW
		SJR Willow Unit	SJRWU	CDFW
		SJR Rank Island	SJRRI	CDFW
		SJR Sportsman Club	SJRSC	CDFW
		SJR Milburn Unit	SJRMU	CDFW
		SJR Gravelly Ford	SJRGF	CDFW
San Joaquin River (Bear Creek to Mud Slough)	14 mile	SJR Stevenson Bridge	SJRSTV	CDFW
San Joaquin River (Mud Slough to Merced River)	3 miles	SJR Newman Waste Water	SJRNW	CDFW
Delta Waterways (southern portion)	3,125 acres	San Joaquin River @ Mossdale	C7A	DWR
Delta Waterways (central portion)	11,425 acres	San Joaquin River @ Prisoners Point	D29	DWR
Delta Waterways (northern portion)	6,975 acres	Sacramento River @ Hood	C3A	DWR
Delta Waterways (western portion)	14,524 acres	San Joaquin River @ Antioch Ship Channel	D12A	DWR
		Sacramento River @ Rio Vista	D24A	DWR
Suisun Bay	25,335 acres	Sacramento River @ Mallard Island	D10A	DWR
Carquinez Strait	5,657 acres	Sacramento River @ Martinez	D6A	DWR

EPA evaluated a fifteen-year period of DWR data. The 7DADM measurement was calculated by eliminating any calculations with less than 7 consecutive measurements and by reviewing only the data rated as good with a “G” data quality flag by DWR. The CDFW data was similarly evaluated, however, the available data only went back as far as 2002. We assessed the number of valid 7DADM for the seasonal periods noted in Table 2 and then noted how many of those exceeded the thresholds in Table 2. Results are provided below in Table 3. These data were then evaluated for potential impairments using the binomial Table 3-2 from the California 303d listing policy and all segments were found to be impaired. It should be noted that the most upstream site in the San Joaquin River (Friant Dam to Mendota Pool) segment did not show impairment for any life stage whereas at least one life stage was impaired in the three downstream sites.

Table 2. Evaluation thresholds used for listing

Waterbody	Life Stage	Season	7DADM Threshold
San Joaquin River (Friant Dam to Mendota Pool)	Migration	March 15 – June 15 (smolts) September 1 – October 31 (adults)	<18°C
	Spawning	October 1 – December 15	<13°C
	Juvenile Rearing	March 15 – June 15	<16°C
	Steelhead Summer Rearing	June 15 – September 15	<18°C
San Joaquin River (Bear Creek to Mud Slough)	Migration	March 15 – June 15 (smolts) September 1 – October 31 (adults)	<20°C
San Joaquin River (Mud Slough to Merced River)	Migration	March 15 – June 15 (smolts) September 1 – October 31 (adults)	<20°C
Delta Waterways (southern portion)	Migration	March 15 – June 15 (smolts) September 1 – October 31 (adults)	<20°C
Delta Waterways (central portion)	Migration	March 15 – June 15 (smolts) September 1 – October 31 (adults)	<20°C
Delta Waterways (northern portion)	Migration	March 15 – June 15 (smolts) September 1 – October 31 (adults)	<20°C
Delta Waterways (western portion)	Migration	March 15 – June 15 (smolts) September 1 – October 31 (adults)	<20°C
Suisun Bay	Migration	March 15 – June 15 (smolts) September 1 – October 31 (adults)	<20°C
Carquinez Strait	Migration	March 15 – June 15 (smolts) September 1 – October 31 (adults)	<20°C

Table 3. Waterbodies proposed for temperature listings (bolded and *italicized* values in the last column exceed the listing thresholds for listing)

Waterbody	Site Code	Start Date	End Date	Life Stage	# of calculable 7DADM in appropriate season	#7DADM in appropriate season which exceed
